EDUCATION

HETIC — Grande École du Web — Paris, France
Master's — Software Engineering & Product Management (equiv. M.S. in Computer Science) — Nov. 2021 – Sept. 2023
Bachelor's — Computer Programming (equiv. B.S. in Computer Science) — 2018 – 2021

PROFESSIONAL EXPERIENCE

Freelance — Senior Software Engineer · AI Specialist — Nice · Sept. 2024 – Present

StratBuy | *Product Design, Engineering & Strategy* — 2026
SaaS platform for managing procurement: sourcing files, tenders, contracts, suppliers and teams.
Stack: TypeScript, Next.js, Auth.js, Prisma, PostgreSQL, Turborepo, GitHub Actions

- Worked on the design of the procurement flows, from the sourcing file through tender and award to the contract.
- Took over and hardened the Turborepo monorepo (Next.js, Auth.js, Prisma, PostgreSQL): 11 documented architecture decisions (ADRs), GitHub Actions CI, multi-organisation isolation and 33 test suites replayed on every change.
- Supported the team on strategic choices, the sales demo narrative and preparation of the first beta.

Sinea Formation | *Lead Full-Stack Engineer* — Sept. 2025 – 2026
B2B platform helping employees develop their soft skills.
Stack: TypeScript, Expo / React Native, NestJS, Prisma, PostgreSQL, React, TanStack Query, EAS, Firebase, Deepgram, Sentry

- Scoped the product with the client (specification workshops, trade-offs, roadmap) and led the technical side: work breakdown, code reviews and coordination of the developers.
- Built and evolved the product's three codebases: Expo / React Native mobile app, NestJS + Prisma + PostgreSQL API and React / TanStack Query back office.
- Shipped the app to iOS and Android stores (EAS builds, native versioning, App Store & Play Store submissions) on a sustained release cadence.
- Built the campaign and challenge engine — progress tracking, badges, per-team statistics — and multi-format feedback (text, audio, video with Deepgram transcription).

aiOrigin | *Founding Engineer* — Feb. 2026 – Sept. 2026
Multi-tenant SaaS platform for autonomous AI agents in the enterprise.
Stack: Python, FastAPI, React 18, TypeScript, PostgreSQL (Supabase), Redis, Temporal Cloud, Docker, Claude Agent SDK, LiteLLM, Stripe, Sentry, PostHog, Langfuse

- Designed and built the platform end to end: fully async FastAPI backend, React 18 / TypeScript frontend, Docker infrastructure and AI layer, on PostgreSQL (Supabase), Redis and Temporal Cloud.
- Engineered a multi-provider agent loop (Claude Agent SDK + LiteLLM) making 4 LLM providers interchangeable without touching agent code, with semantic tool selection across 850+ OAuth-connected applications.
- Built token-by-token real-time streaming (Redis Streams → SSE → React): idempotent sequenced events, crash-resume and inactivity watchdog, removing perceived wait on multi-minute responses.
- Secured multi-tenancy: ES256 JWT auth (JWKS), PostgreSQL RLS, a 5-level permission hierarchy, sandboxed tool execution and idempotent Stripe usage-based billing.

Ida | *Full-Stack Engineer* — Sept. 2024 – Sept. 2025
B2B ordering platform for fresh produce serving neighbourhood grocery stores.
Stack: Python, FastAPI, React, PostHog

- Designed and built the core ordering and fresh-product management features of the platform (FastAPI, React).
- Delivered a dynamic price list: real-time pricing, packaging units, product groups and business rules reacting to stock movements.

ENTREPRENEURIAL EXPERIENCE

Orbi Nice · Sept. 2026 – Present

Founder & Product Engineer

Prompting coach for companies, living inside teams' AI assistants. Live at get-orbi.com.

Stack: TypeScript, MCP (SDK + widgets), React, Vite, Next.js, Supabase, Stripe, Railway, Microsoft 365 Copilot

- Designed, built and launched the product solo in under two months: MCP server with widgets rendered inside the assistant, Next.js dashboard, Supabase, Stripe billing and a Microsoft 365 Copilot agent.
- Built the coaching loop: prompt feedback at the right moment, XP, 5 levels and 7 mastery dimensions, best prompts turned into skills shared in an internal marketplace, aggregated manager views with no conversation ever shared.
- Designed the go-to-market: reseller model for AI trainers, billed monthly for actual use per active client and per member.
- Built an automated prospecting and outreach system to find prospects for Orbi (AI trainers, consulting firms, companies) and contact them: a 7-step method to write each message from the prospect's profile, 30 templates by target, personalised emails generated for each prospect in French and English.

Axiome App Studio Nice · 2025 – Present

Founder & Product Engineer

Consumer mobile app studio, apps designed, built and shipped solo.

Stack: TypeScript, Expo / React Native, Supabase, RevenueCat, ML Kit, PostHog, Sentry

- **Belle**, an AI beauty advisor live on the App Store: vision-model photo analysis, a daily routine tuned to weather and UV index; Expo, Supabase, RevenueCat, FR/EN/ES/IT.
- **Recto AI**, which explains the hard passages of a book (page photo, highlighting, AI explanation): Expo, Supabase, RevenueCat, ML Kit, FR/EN/ZH.
- Industrialised the release chain (version bumping, local .ipa / .aab builds, App Privacy, App Review responses), turning each submission into an automated procedure.

ADDITIONAL

Languages — French (native) · English (fluent)

Interests — Passionate about cosmology and physics: in my free time, I study the depths and complexity of our universe.
